

Keynote April 2023-2
Aries, note of C
Color RED

This column is brought to you by the Institute of BioAcoustic Biology & Sound Health and is dedicated to the idea that the frequencies of voice can be seen as a holographic representation of all that you are.

The Secrets of the Human Biofield

Accelerating human healing through Vocal Mapping: our future depends on its acceptance

What we fear keeps us mentally imprisoned and emotionally restrained. What we fear is usually something we cannot control or do not understand.

As a society today, what do we fear? The safety of our loved ones, our lineage, and humanity. Personally? We are concerned with our ability to sustain vitality while aging, which includes our mental faculties and physical health; to overcome resistant pathogens that threaten our world; to preserve our environment; to survive the soaring costs of food and medicine. We want/need to be free of pain and strife.

Our ancestors did an amazing job of supporting health and vitality with very few sophisticated tools and without really understanding their own solutions. We trust allopathic medicine and humanity's reliance of the realms of science but it is evident that even modern medicine does not have all the answers. In many ways, it is obvious that the answers are available but simply not realized. What if we could combine the ancient and the new technologies, bringing together the new, the practiced and the proven?

Let's consider the idea that we can combine the ancient ideas of the body's life force with sophisticated computer technology. Could we create an early warning and remediation system for health and wellness?

It usually takes a well-funded scientific breakthrough or an overwhelming catastrophe to facilitate a comprehensive change that actually makes a difference. People are slow to embrace new scientific information because anything fundamentally different from the status quo intimidates them. Although a major disaster forces transformation, people don't always adjust willingly. The most profound and permanent way to cause a shift in perception is through affirming life experience.

It has been written that many great thinkers have attempted to decode the mysteries of the universe using math, geometry, music, sound, color, frequency, and architecture. Modern science has created blood tests, X-rays, CAT scans..., to coax the body to give up its secrets. But is there a better way making its way to the forefront of acceptance?

A Fascinating Vaccine Story

Twenty-three years ago a young four-year-old named Jocelyn, who had been diagnosed with hyperlexia, was brought to our Sound Health Clinic in Ohio. We were told that Jocelyn would only repeat sentences of others to convey what she wanted to express and would not make her own sentences.

Jocelyn's parents claimed that she could also read well beyond her age. I didn't believe them and had prepared a few sentences to test her.

Mary has a little rabbit.

Home, Home with a biscuit.

Three blindfolded mice.

She read the sentences absolutely correctly but each time she came to an out-of-place word, she stopped, tapped her finger on the wrong word several times while looking me straight in the eye with a stare that indicated, absolutely that she knew something was amiss.

I was still skeptical, so I put a Wall Street Journal in front of her. She read several sentences correctly. Although she was simply reading, we were able to capture and evaluate her vocal frequencies. The computerized evaluation indicated that she had a negative reaction to a mandated vaccine known as DPT.

When she was ambiently presented an antidoting frequency formulation, she turned to her father - she was sitting on his lap holding her doll - and said to him, "This is a dolly." We were all flabbergasted.

We created a tonebox layered with frequencies for her based on her voice architecture. She quickly began to initiate appropriate vocal interactions. It is speculated that she learned to read from closed-captioned TV. Using the information of her case and many more like her, we were able to create a database template - called PreVac - of frequencies associated with vaccine damage.

Today she is beyond brilliant with words, speaks several languages, translates online articles and presentations, and is absolutely fascinated with sounds and the appropriate structure of languages. She reported that the highlight of her life was a trip to Japan with her family where she could be immersed in a language she loves to hear and can understand.

Dorine Davis in her many publications about children with verbal issues has continued to confirm the use of BioAcoustic Vocal Profiling to help her clients, young and old, regain speech and cognition.

We notified those who claimed to be authorities in such matters but were summarily dismissed as crack-pots although it could be shown that vocal analysis had helped over 300 children. Since that time, millions more vaccine damaged kids have likely suffered because no one would even consider such an ancient idea as using vocal energy as a diagnostic tool.

Decloaking Resistant Pathogens

In 2000, Nexus Magazine published a preliminary study that we had completed showing that resistant pathogens could be decloaked using frequency oscillations, but no one paid attention. In December 2019, we used the same protocol to examine the frequencies of Covid. We published information showing that this virus was likely man-made because we had been mathematically following natural viruses for over ten years. When a virus comes along, there is nearly always a mathematical antidote. For Covid, the math antidote was the protein that would accelerate the original strain. Nature does not work this way. The math was conflicting, but it set us on the path to figure out an alternative which we published and gave away to the public – mathematically based nutrition and biochemical antidotes, all of which have now been acknowledged by main street publications and journals. Our “man-made” proclamation and frequency-based antidotes released in 2019 were ignored – how many people died? How much profit was made in the name of a supposed pandemic?

We published our finding, including Covid associations with vascular issues, circulation, infertility, and fatigue. That series of articles, including spike frequency antidotes, can be downloaded from <https://www.soundhealthportal.com>. Mathematically speaking, the next Covid issue will be pancreas related.

Based on our findings, we created a template that could be used by the public to BioAcoustically evaluate their own vocal frequencies for these issues: Services/Campaigns at <https://www.soundhealthportal.com/>. The idea of putting health into the hands of the people, establishing SELF-HEALTH has always been a paramount mission of the Sound Health Institute.

The work we did was similar to the work of Royal Rife that the US government shut down because those in charge did not agree with Rife’s methods. Unlike Rife, we reported that frequencies can be blocked by using the same formulations used for noise cancelling headsets and appliances.

At present what is happening to us is similar to what is being perpetrated on Stanislaw Burzynski of the Burzynski Cancer Clinic in Texas where it has been shown that cancer is being reversed.

A Look Inside Using Voice Analysis

2015 was the year that the author of this article fell off a two-story balcony, fracturing her back in three places (T-12, L-1 and L-3) and smashing a few facial bones. A month in rehab wearing a body brace made walking possible. But now, years later, the returning back pain was intense. Could anything be done? L-4 kept showing up in my vocal print but I wanted confirmation that that was not a part of the original injury.

X-rays revealed:

Wedging deformity at L-1

X-rays showing anterolisthesis at L-4 and L-5. Surgery was suggested.

View 1

View 2

[Anterolisthesis is an abnormal alignment of bones in the spine and usually affects the lower back. It occurs when an upper vertebra slips in front of the one below. Pain is often the first symptom of anterolisthesis. Misaligned vertebrae can pinch the nerves, and this can have painful and debilitating consequences. Other parts of the body, such as the arms or the legs, can also be affected by anterolisthesis.]

☐	CATEGORY	NAME	TAG	RELEVANCE	USE
☐	Muscle - hip/thigh	Quadratus femoris	L	29	Back
☐	Muscle - hip/thigh	Quadratus femoris	L	29	Deep back muscles
☐	Muscle - spine	Lumbar Vertebrae L-4	L	29	Nervous system control: prostate gland, muscles of the lower back, sciatic nerve
☐	Muscle - spine	Lumbar Vertebrae L-4	H	29	Nervous system control: prostate gland, muscles of the lower back, sciatic nerve
☐	Muscle	Longissimus cervicis	L	23	Neck/back
☐	Salsa Dancing	mulifidi	H	19	Back; lateral rotator of the spine
☐	Neck/ back	Splenius cervicis	H	18	Neck muscle for extending and flexing the head
☐	Muscle	Semispinalis thoracis	H	18	Back; extends/rotates vertebral column

The anterolisthesis was identified through the frequencies of the voice, remotely and without expensive, intrusive machinery.

Using the frequencies assigned to L-4 and L-5 together in specialized formulations creates the frequency associated with Ankylosing spondylitis – which my grandfather and aunt lived with for many years.

Bringing to mind that the body is beautifully, consistently Mathical, could we be math-based sentient robots supervised and managed using the math of the voice?

Catastrophic Events

The staff of Sound Health was invited to evaluate several scientists working in the gaping hole left by the terrorist bombings of 9/11. Based on our findings we were invited to the Firemen's Union Headquarters in New York to evaluate 17 additional firefighters who were experiencing the "Fireman's Cough." Most had been exposed to Mirex. We showed in person at the Union Hall that frequency presentation could stop the fireman's cough. We were invited by the Union President to test all of the exposed firefighters. The next day we were disinvited by the Union's legal advisors. How much suffering could have been prevented?

We also warned from the vocal prints of the firefighters and union staff that there would be a rise in cancer. That was confirmed only a few years later. How many lives were lost when there was a potential solution that was ignored? If Vocal Profiling was in the hands of the people, SELF-HEALTH would have been possible.

Labor and Delivery

A BioInformatic paper was delivered at Ohio University showing that the biochemical Pitocin (which initiates labor) could be monitored via the voice. A mother went into the hospital for a planned birth but ended up having a C-section. We started monitoring her voice at 5:30 am and by 10:30, her voice indicated that her body was fighting the drug. She stayed in labor until 3 the next morning when both she and the baby went into stress – an emergency C-section was performed.

Think of how many trips to the hospital – only to be told it was false labor – that would save!

Other case studies have been shared in this column, including toxins and Alzheimer's.

Toxin architecture: high hollow peak

Robin Williams' vocal Alzheimer's architecture

Not only does this kind of vocal print allow us to show the vocal architecture of Alzheimer's years before symptoms manifest but it has allowed us to create templates for gout, cancer, broken bones, migraines, anti-aging and more.

Templates online for the public: <https://www.soundhealthportal.com/templates/>

Work over the years has allowed us to collect homogeneous vocal prints; we have experimented with these people and have been successful in helping their bodies mitigate their own issues. Here are a few results:

Denny had an enlarged heart and a pacemaker. After being provided ambient sounds based on his vocal print, his pacemaker was disabled, and his heart returned to normal size, form and function.

Bob had his lower leg muscles ripped off in a motorcycle accident. After 3 years of physical therapy, he could still not use his leg, but after a few months of sound, his leg abilities returned to normal. He is featured in the documentary Miracles of Non-Medicine: <https://vimeo.com/249503694>

Ellen's children were called to her bedside. She wasn't expected to live thorough the week. Sounds were provided to her in the hospital to provide comfort, and a month later she was still alive. Medical tests revealed that her body had somehow grown new vessels around her blocked ones. God must not want her yet, joked the doctor.

John was able to regrow his nerves and start walking again after a hospital operation left him paralyzed.

Gary regained strength in his arms and hands from peripheral neuropathy.

Pauline regained her eye sight and color perception after having lost her vision to macular degeneration.

Jesse, survivor of a motorcycle accident (crushed leg) that required a three-month hospital stay is now able to walk. He used the sounds in the hospital mostly to alleviate pain.

When medicine is causing side effects, a vocal print can often offer suggestions for a more compatible alternative. Even a newborn's cry provides information about their health.

Vocal analysis is leading the way to understanding math as medicine. The idea brings to mind Spock from *Star Trek*'s Vulcan salute, "Live long and prosper."

We may think we are free but our health care services are dictated and controlled by people far removed from our human needs. To them we are merely a statistic on their bottom line of their financial page.

There will come a time when we can't afford medications or care, and we have to become a guinea pig for experiments or we simply will be put to death, quietly, because we have become a burden.

There is a solution: put health care back in the hands of the people; teach people to take care of themselves on a FOREVER basis.

The Sound Health Institute wants to provide the tools and solutions to the public so that everyone can sustain SELF-HEALTH for themselves and those they care about.

Just as there are Pathways of compounds called Chemistry, there are Mathways of subtractive frequencies called Sonistry that can be used to create a numeric matrix of biomarkers capable, individually, and collectively, of being predictive, diagnostic and prescriptive.

Travel to outer space can be enhanced with mobile frequency-based solutions that have shown efficacy to overcome bone loss and muscle atrophy. BioAcoustic Biology has been shown to be able to predict reactions to medications, chemicals and allergens. Muscles traumatized from stroke and/or muscle signaling disorders have recovered. Documentation confirms that these changes sometimes occur within a few minutes as muscles gain strength and mobility.

Our brain communicates using the language of math expressed as frequency. As these signals reach the brain, the biofrequencies are sorted, routed and assigned an interpretation and responsibility. Our brain and our Biology are hardwired to respond to these basic principles of math.

BioAcoustic Biology is an area of scientific endeavor that is in the process of becoming scientifically established: a protoscience. Visionary leaders will see this novel idea as a prophecy for a new medicine which can provide conclusions based on observation and information. Those who wish to support the status quo will see this paradigm as a threat but will find it hard to argue with the consistent and efficacious outcomes that continue to accrue. This protocol remains in a research mode as of the date of this paper.

Government finally admits that 9/11 toxins caused cancers

[Burzynski Clinic Reviews, Ratings | Health & Medical near ... - BirdEye](#)

Burzynski Clinic is an international **cancer** care **center** with more than 100 employees. The clinic offers several options of personalized treatment, including conventional, approved targeted, combinations as well as experimental therapies.

In sonocytology studies, a Bioscope AFM ([atomic force microscope](#)) was modified to be able to detect the vibrations of the cell wall of a living cell. These vibrations, once amplified using computer software, created audible sound, and it was discovered that cancerous cells emit a slightly different sound than healthy cells do. Gimzewski and Pelling hope that sonocytology **may someday have applications in early cancer detection and diagnosis.**
